DETAILED ACTION***Allowable Subject Matter***

1. Claims 1-9, 11-18, 22, and 25, respectively renumbered 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Izumi et al discloses a reproducing apparatus containing an equalizing means for controlling group delays (Figure 5 and described in Column 11 Lines 38-48) and a detecting means for detecting the digital signal (Figure 1 shows the detection of the signal as described in Column 11 Lines 38-48). It is further disclosed by Twitchell et al, having a transmission system where conversion and equalization of the signal is processed and thereby turns the signal into a digital signal by the A/D converter and further sent to the controller for further processing (Figure 1 shows the conversion through the A/D converter 80). Furthermore, Sasaki et al teaches the detecting means for conversion of a digital signal that outputs from the converts the signal and further processes the signal allowing for a proper detection and reproduction of the signal (Column 3 Lines 50+ through Column 4 Lines 1-30). However, the prior art of record fails to disclose, teach, or suggest the following limitation:

"..wherein said control means includes multiplying means for multiplying the digital signal to be input to said detecting means by the n-values signal output from said detecting means to output an evaluation value signal representing a level of predetermined frequency of the information signal output from said equalizing means, and wherein said control means controls a group

delay characteristic of said equalizing means according to the evaluation value signal."

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
